

Specialty Handle Materials

Carbon Fiber Sheets

We, at Halpern Titanium, have been offering the finest quality carbon fiber sheet material for over a decade.

Our carbon fiber is aesthetically pleasing and boasts a woven pattern throughout the sheet. Because our carbon fiber is manufactured in high-pressure presses under extremely high temperatures, our sheets do not have pits or voids often seen in other carbon fiber products on the market. Most of our stock .125 carbon has a glossy finish on the front and a 220 grit sanded finish on the back.

See specials for our exclusive textured carbon fiber.

Unfortunately, the worldwide shortage of carbon fiber fabric has resulted in a dramatic price increase. We have maintained our high standards throughout this difficult market fluctuation. Using our carbon fiber will guarantee a dramatic effect and the value of your project will increase instantly. Invest your money in our high quality carbon fiber and you will have no regrets.
